

# OPEN HOUSE

**Where:** Jankes Never Rest Farms at N11898 County Road F, Humbird, WI 54746

**When: August 7th and 8th 2024 - 9:00 AM. to 3:00 P.M. both days -**

**What:** Come and watch the all New Greenline Vertical Storage System in operation. We will be transferring around 400 tons of Corn Silage out of the 24x124 Greenline system and thru a 440 Fieldline blower, up into the 24x92 poured concrete silo right beside it.

This will be the **Ultimate Test** to see what the Greenline H series unloader can really do. This unloader has been in operation since October 2023, We are anticipating an average of around 2000 lbs. per minute in delivery, but up to now it's been hard to get a real number because on average the unloader only runs a minute or less to get total amount needed for a batch of feed.

We will be running the Greenline H Series unloader for 45 minutes ON and 45 minutes OFF thru out the day so that you have opportunity to watch the system in operation and be able to check it out and ask questions when it is shut down.

## GREENLINE

### Vertical Storage Solution

- Ground control filling - (No climbing to fill)
- Bottom Unloading - (feed the cows while at the same time you are adding fresh inventory on top)
- Telescoping cutter arm - (No short arm long arming the unloader manually)
- Fast Unloading - (Anticipated 1000 lbs. per minute Haylage, 2000 lbs. per minute Corn silage)
- Fast Filling - (10" fill pipe and heavy-duty stainless steel side fill system)
- Fast setup to add inventory - (No climbing the silo to open the fill door, raising the unloader, leveling, packing, covering or uncovering)
- Heavy duty distributor - (With the motor and gear box being outside the silo to make it easy to service)
- Onboard Nitrogen generator - (Injecting nitrogen into the unloader cavity reduces the oxygen level and reduces the rusting of the cutter chain)
- Inventory level sensor - (The Smart bob level Sensor tells you how much feed is in the silo)
- Side fill vent Camera - (The camera gives You the peace of mind that the silo is being filled correctly.)
- Climb assist - (The 70 lb. counterweight climb assist helps you climb to the top with ease)

### • Zack and Abby Janke and their 2 girls
